

Change of a main domain

It is possible to change the main domain for your hosting service. The new domain may not have any other hosting service assigned to it.

How to change the main domain?

Log into managera, choose the name of your domain and then click **Website hosting** and **Change your main domain** .

The following page will appear:

Insert the name of a new domain and **Accept**.

In the next stage you need to choose your email option. There are two possibilities:

- you may remove the configuration and assign email account to your new domain.
- you may keep accounts created for the previous domain but it requires ordering MX plan. For details view the page:

<http://www.ovh.co.uk/fr/produits/mxplan.xml>

You'll be informed about the price and a proforma invoice will be generated. After the payment the domain will be changed.

If an error occurs, it may mean that your new domain is already assigned to a hosting service. And you need to go through the procedure one more time.
